DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Catlin et al. (US 5,721,646.)

Regarding claims 1, 4, 6, 7 and 9-12, Catlin discloses an external rearview mirror assembly for a vehicle comprising: a housing (20 of Fig. 1) defining an interior therein, a rim (81 of Fig. 1) configured to limit pivoting of a mirror assembly, and a covering (back of the housing); a holder (64 of Fig. 1) depending through the housing into the interior, the holder configured for attachment to the vehicle (Fig. 1, line 35 to line 38 of Col. 7); a carrier plate (18 of Fig. 1) defining a base portion with a recess thereon and a plurality of openings therethrough (see Fig. 6), the carrier plate attachable to the holder, the carrier plate spaced apart from the rim and the

Art Unit: 2872

covering such that the plate is connected to the holder but not to the covering, the plurality of openings selected from the group consisting of offset openings, spaced-apart openings, elevated openings, recessed openings, openings configured for electrical connections, openings configured for attaching devices and combinations thereof (see Fig. 6); a mirror adjustment assembly (16 of Fig. 1) mountable to the carrier plate; and a mirror arrangement having a mirror glass (12 of Fig. 1) extending substantially in a given plane, the mirror arrangement mountable to one of the mirror adjustment assembly and the carrier plate by one of a sliding attachment, a screw attachment, a snap in attachment, a shape-fit attachment, a clamping attachment and combinations thereof (see Fig. 10), wherein one of the; housing, the carrier plate and combinations thereof are cooperable to provide structural support for one of the mirror adjustment assembly and the mirror arrangement. Catlin does not teach attaching the carrier plate to the holder by clamping.

However, attaching mechanical parts by clamping mechanism in a mirror assembly is well known in the art.

It would have been obvious, at the time the invention was made, to a person having ordinary skill in the art to use the

Application/Control Number: 10/643,163

Art Unit: 2872

clamping mechanism in attaching the plate to the holder for the purpose of reducing the time required to assemble the device.

Regarding claims 2 and 8, Catlin discloses the plurality of openings being adjacent cells configured to dampen vibration of the mirror assembly (line 51 to line 62 of Col. 2.)

Regarding claim 3, the combination discloses the recess being shaped complementary to the holder.

Regarding claim 5, the combination discloses the plurality of openings varying in diameter and in height (see Fig. 6.)

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Fayez G. Assaf whose telephone number is (571) 272-2307. The examiner can normally be reached on 8-5 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn can be reached on (571) 272-2312. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
